

MuSe™ Music Server

MuSe™ Music Server is a high performance hard disk based music server for professional, commercial, industrial and high-end residential applications. It is housed in a high quality 4RU industrial 19" rack mountable chassis with locking cover for security. The unit is available pre-configured to serve up to 4 stereo channels simultaneously. The unit will play various digital audio formats including MP3 and WMA files. The music files can be accessed from the internal hard disc, from other drives on the network including any NAS. Each channel can have many different play lists that can be scheduled to play at any time. Each play list can support up to 5000 songs. Each play list has a built-in random play to prevent the same song from repeating again and also preventing a sequential play. Total autonomous operation means no supporting keyboard, mouse or video display are needed. Music can be loaded to the system hard drives via USB, DVD disc or Ethernet connection. Easy interface to the PADS™ products allows for music distribution in a commercial environment on cat5 cables.

Specifications:

Size: 19" W x 20" D x 7" H
Weight: 39 lbs. Approx.
of outputs: 4 stereo channels max.
Hard disk: 80 GB standard, options 400GB+
