

**STEP #1** - Install wall brackets with appropriate distance applied.

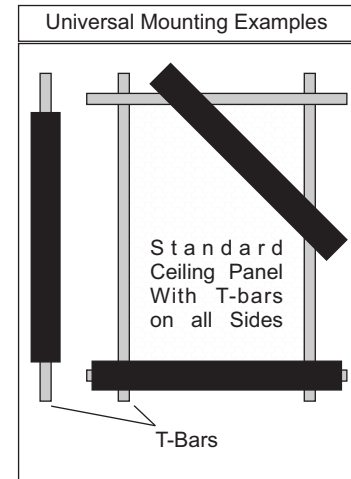

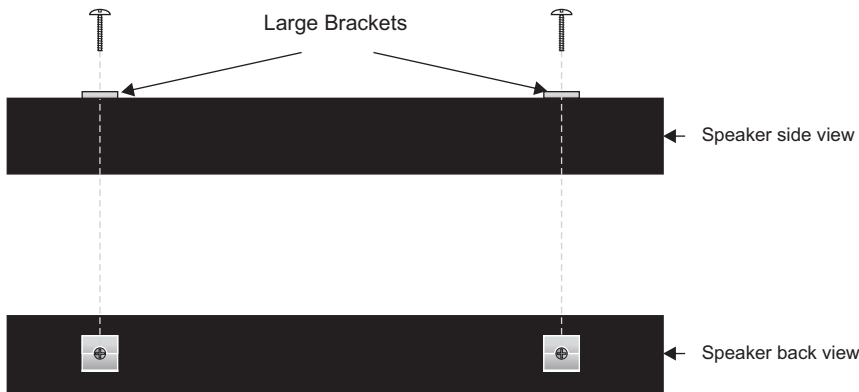

Mounting Information	
(from screw-hole-center to screw-hole-center):	
	Bracket Screw Center
<b>PHA-4</b>	 7-7/16"
<b>PHA-8</b>	 13-11/16"
<b>PHA-16</b>	 20-1/16"
<b>PHA-25</b>	 37-3/16"

**STEP #2** - Mount speaker with brackets to installed wall brackets.

**STEP #1** - Install Bracket-A; the larger of the two brackets, onto the back of the PHA speaker. The direction of the brackets is dependent on the placement at the T-Bar(s), see example below.

**STEP #2** - Affix the speaker to the metal T-Bar located in your ceiling. While supporting the speaker so it doesn't fall, screw Bracket-B into Bracket-A from the side and make sure the bracket is clamped over the T-Bar. When finished, the unit should look the illustration and photo below.

**NOTE:** This process may require two people to accomplish. You will also need to remove ceiling panels.
